

INDUSTRY TRENDS WATCH IN 2026

India's Power Transmission & Distribution sector is witnessing growing investment as electricity demand rises and renewable energy integration accelerates. Grid modernisation, transmission expansion, and substation upgrades are becoming key priorities across the industry.

This growth is driving demand for reliable, precision-engineered components, advanced manufacturing capabilities, and quality-focused supply chains to support the development of efficient and resilient power infrastructure.

PRODUCT SPOTLIGHT

Calibrated Spacer

This thin cross-section spacer is manufactured from Carbon Steel and requires tight cylindricity and surface profile tolerances.

These requirements are achieved using our Vertical Turret Lathe (VTL) machines. The spacer performs a critical function in Power Transmission & Distribution systems.
