

INDUSTRY TRENDS WATCH IN 2026

India's oil and gas sector continues to evolve, with increasing investments across exploration, refining, petrochemicals, and energy infrastructure. This growth is driving demand for precision-engineered, durable, and export-ready components.

Advanced CNC machining, stringent quality controls, and material expertise are becoming increasingly important for manufacturers to meet the evolving requirements of global oil and gas applications.

PRODUCT SPOTLIGHT

SEAL RETAINER

This Seal Retainer is manufactured from Stainless Steel Grade 316. The critical face serration is machined on precision CNC Turning Centers as per customer specifications.

With a collar thickness below 2 mm, the component requires stringent quality controls and is supplied to export customers in the Oil & Gas sector.
