INDUSTRY TRENDS WATCH IN 2026

The Oil & Gas business continues to focus on operational reliability, infrastructure modernisation and effective use of resources. The demand for precision-engineered components is crucial as organisations upgrade equipment and enhance their production and processing capacities.

There is more and more demand for advanced multi-axis CNC machining, dimensional accuracy and reliable sealing performance in component manufacture. These features assist manufacturers achieve strict OEM criteria and support reliable performance in important industrial applications.

PRODUCT SPOTLIGHT

BODY BAR STOCK 1/2 NPTCOND.A

This Body Bar Stock component is manufactured from Stainless Steel Grade 316 square bar stock using 5-Axis CNC Vertical Machining Centers.

The part involves complex six-side machining and demands stringent control over sealing surfaces and GD&T requirements. The component plays a vital role in Oil & Gas applications.

LIFE @ SEE

National Education Day: Making a Difference Through Education at SEE Linkages

SEE Linkages promotes education by rewarding employees' children and supporting 50 underprivileged girls annually through Project Savera, creating brighter futures.
